

## **Introduction**

*The publication **Forestry and Game Management** gives overall information on forestry activities and hunting management in the Czech Republic.*

*The publication consists of two independent sections: 'Forestry' (data for the year 2013, time series, economy), and 'Game Management' (data for the year 2012, time series); both containing graphical supplements. The first section contains basic data on forestry activities for the Czech Republic in total, i.e. after grossing up. The forestry data are taken from the Annual forestry questionnaires Les 8-01 completed and submitted by businesses registered in the Business Register with 20+ employees whose principal activity is classified as CZ-NACE 02 (Forestry, logging and related service activities), and by businesses which manage forest land areas of 200 hectares and over. Some data are broken down both by region and by type of business (state, private, municipal). Classification of businesses is subject to appropriate classifications and nomenclatures (e.g. CZ-NUTS, legal status, type of ownership). Changes can occur during the time, for example, in the type of ownership of businesses; in such cases a reclassification of businesses is required. The range of the time series depends on the data availability. The section 'Forestry' includes Economic accounts for forestry and logging for years 2007–2012, where data for 2011 were revised (correction of source data in relation to the national accounts).*
