

FOREWORD

The Statistical Yearbook of the Capital City of Prague is a key publication of the Regional Office of the Czech Statistical Office in Prague. It brings a summary statistical overview about the Region and its individual territorial units. Thanks to its scope, it can depict statistical data on demographic, social, and economic development of the Region in more detail and in a summary way. Furthermore, it also includes selected data from other areas. Already the 25th volume of this edition is issued this year. One of the main advantages of all editions is not only the uniformity of content in all Regions, but also the fact that the structure of the chapters of the publication is basically unchanged and always follows the relevant edition of the Statistical Yearbook of the Czech Republic, also prepared by the Czech Statistical Office.

In this edition, data on the population projection of the Region until the year 2080 in the chapter on Population and data from the Integrated Farm Survey in the chapter on Agriculture were omitted. Besides that, we have modified the content of some chapters. For example, in the chapter on Population, the reader will find more detailed data on births and migration; however, data on abortions are no longer available there, they are only published by the Institute of Health Information and Statistics of the CR. The chapter on Elections contains results of October elections to the Chamber of Deputies of the Parliament of the Czech Republic. Data on Prague are published essentially for the period from 2022 to 2024; in selected indicators, they are in a longer time series from 2000 onwards. The publication is available in electronic form on the Internet; however, you can also buy a printed version.

In terms of territory, besides information on Prague, available data by administrative district of Prague are also published here; in the chapter called "Capital City of Prague", data on city sections and cadastral territories of Prague are published. Well-arranged comparisons of Regions for all chapters are available in the electronic form of the Yearbook on the website and they are also published in a separate publication called "Comparison of Regions in the Czech Republic" that will be published on 22 January 2026.

Methodological notes on individual chapters are provided together, as a summary, after the data section. References and links to data sources used for preparation of the Yearbook, explanation of abbreviations used in the Yearbook and of symbols used on the geographical map of the Region are also added to them.

State statistical surveys are the basic source for the published data. Besides data sources of the Czech Statistical Office, available data from ministries and other institutions (listed in detail in an overview of "Data sources – links to ministries and other institutions" as well as in relevant tables, charts, and cartograms) were used. A large part of published data is regularly entered into regional databases of the CZSO or it is provided in long-term time series, including data in the open text format. An application for statistical data dissemination – DataStat – is an important source of this information. A new feature is also the display of data in maps in the Statistical Geoportal. A link to these applications can be found on the website of the CZSO at <https://csu.gov.cz/>.

Statistical Yearbook of Prague is not intended to encompass all pieces of information collected and processed by the State Statistical Service. More detailed data on development of Prague, its administrative districts, city sections, and cadastral territories are also available in other products of the Regional Office (e.g. Statistical Bulletin, publications on demographic matters, thematically focused analyses, etc.), which are available in electronic form on the Internet. Many other pieces of useful information can be found namely on the website of the Regional Office of the Czech Statistical Office in Prague (csu.gov.cz/praha), not only the latest data, but also interesting facts about the Region, graphical and map outputs, information for respondents of statistical surveys, information about activities of the Regional Office itself, and much more. In the end of November 2025, another regional analysis was published, this time with the topic of "City sections of the Capital City of Prague - 2024" (Czech only; in Czech it reads: "Městské části hl. m. Prahy - 2024"). It provides a summary view of these territorial units. Its purpose was to describe individual city sections in terms of geography, history, civic amenities, and future development using text and statistical data.

Our long-term experience and users' interest in information in a regional breakdown make us believe that the Statistical Yearbook of Prague will continue to be an important and sought-after source of information for both professional and lay public. The same as in the previous years, we welcome your potential suggestions and comments as to the Yearbook's content – they can be a valuable contribution to the preparation of regional publications in 2026.

We express our thanks to all authors and colleagues for the effort and time they devoted to the preparation of the content as well as technical matters of the Yearbook.
