

Introductory notes

This publication contains selected indicators from the quarterly statistical form Zdp 3-04. Reporting obligation is imposed to incorporated businesses classified as health insurance companies on the base of the principal activity (CZ-NACE group 84.3).

***The legislative framework** for the activity of the health insurance companies in the Czech Republic is laid down by laws on the Všeobecná zdravotní pojišťovna ČR (VZP ČR; General Health Insurance Company of the CR) and on employees' (branch) health insurance companies. In accordance with these laws, the health insurance companies are bearers of public health insurance for the insured they register.*

*This statistical publication contains **preliminary data** for 2.Q.2017 and 2.Q.2016, which are roughly at the same level. Highlighted are the indicators "Premiums written", "Costs of health services" and selected indicators of "Assets and Liabilities".*

Also included are brief analytical comments characterizing development trends of key indicators on health insurance companies in 2.Q 2017 in comparison to the corresponding quarter of 2016 and methodological notes on data in the tables.

In interpretation and use of the indicators presented one should keep in mind that due to the deadline for the submitting and processing of statistical form Zdp 3-04 (by the 28th calendar day following the end of the reference quarter) which comes earlier than the closing date of the reporting units' accounts, the units are allowed, in compliance with methodological notes to the form, to use informed guesses for the reporting of those statistical indicators which are defined with regard to accounting indicators or derived from them. These guesses are then updated using a retro-correction system: the reporting units can submit, together with data for a current quarter, corrections (updates) of estimates for all previous quarters of a current year.

*In comparison to 2016 **no changes** were made in the quarterly statistical form Zdp 3-04 for 2017 as regards the manner of reporting. As in 2016 data in these sections are recorded as totals for public health insurance and other taxable activities.*

In the statistical survey 2017 the indicators of Assets and Liabilities, costs of health services, increases and decreases of intangible and tangible fixed assets, revenues from public health insurance premiums including fixtures, costs and revenues are monitored similarly to 2016.

In comparison to 2016 no changes were made in the statistical quarterly survey Zdp 3-04 for 2017.
