

Annotation

The gross agricultural output increased in the observed year 2007 (in constant prices 1989) by 3,3 %. Better earnings in the crop output (especially considerably higher harvest of cereals, potatoes, rape and grapes) were mainly caused by kindly climatic conditions. There was slight increase of the gross animal output as against the year 2006.

The growth of gross agricultural output in current prices is substantially more conspicuous due to increased price growth that were paid to agricultural producers for their products. The rise of crop prices and price cut of slaughter pigs are the principal features for the year 2007.

The gross agricultural output (in constant prices) per hectare of farmland achieved 17 129 CZK in the year 2007 and increased by 3,4 % against the previous year. The gross agricultural output per agricultural worker rose by 8,2 % and achieved the amount 507 947 CZK; its level was affected by decrease of agricultural workers.
