

This publication takes up on previous publications of the Czech Statistical Office issued from 1998 containing always the Czech Republic energy balances for three-year period. Publications issued in June 1998 under the file number 675/98 - 3150, in May 1999 under the file number 573/99 – 3150, in January 2000 under the file number 95/2000 – 3150, in January 2001 under the file number 86/2001-2110, in February 2002 under the file number 85/2002 – 2110, in February 2003 under the file number 185/2003 – 3120. , in February 2004 under the file number 257/2004 – 3120, in February 2005 under the file number 234/2005/2410, in March 2006 under the file number 333/2006/2410 and in March 2007 under the file number 293/2007/5103.

This publication comprises the final energy balance for 2004 and 2005 and the energy balance for 2006.

Furthermore, it comprises attached tables with preliminary data for 2007 concerning extraction, production, imports and exports of natural gas, electricity, coal and crude oil, total and converted consumption and electricity and natural gas consumption of households in division by individual months.

The whole publication is presented in Czech and English version (including all tables translation).

In conclusion of the publication there are described the CR energy balance indicators according to the Czech Statistical Office methodology. Methodical contents of the fundamental energy balance indicators are in the long-term stable, so as to secure data comparability in time series.

The publication is completed with a graphs section representing development of the principal energy balance indicators from 1990, international comparison and trends of energy balance main indicators from 1990, international comparison and diagrams of fuel and energy flows in 2004, 2005 and 2006.

In the area of liquid fuels, first of all, there are adjusted and revised some data for that reason to meet requirements of international methodology for individual kinds of fuel classification in the category of fuel oils (Heating and Other Gasoil, Fuel Oil-Low Sulphur $\leq 1\%S$, Fuel Oil - High Sulphur $>1\%S$). For this reason there is, in 2004 and 2005, united data concerning Light and Heavy Fuel Oils incorporated in the data for Other Liquid Fuels. In 2006 there were already surveyed figures for Heating and Other Gasoil, Fuel Oil-Low Sulphur $\leq 1\%S$, Fuel Oil -High Sulphur $>1\%S$. Figures concerning Light and Heavy Fuel Oils in 2004 and 2005 are at your disposal in previous publication (EB CR 2003, 2004, 2005).
