Methodological notes

All data refer to citizens of Czechia and foreigners with permanent residence in Czechia, third-country nationals with temporary residence in the territory of Czechia based on a long-term visa (over 90 days), nationals of the EU Member States, Norway, Switzerland, Iceland, Liechtenstein and their family members with notified temporary residence in the territory of Czechia and foreigners granted international protection in Czechia. Since 2022, persons granted temporary protection in Czechia with usual residence in Czechia have also been included in the population.
For more detailed information see https://csu.gov.cz/population-methodology.

For definitions of demographic events and the most commonly, used demographic indicators see https://csu.gov.cz/population-change-methodology.

*From 2021, the **territory of districts** is defined by the Act No 51/2020 Sb, on the Territorial Administrative Division of the State. Districts are defined by the Administrative Districts of Municipalities with Extended Powers (see Decree No 346/2020 Sb, on the determination of administrative districts of municipalities with extended powers, the territory of districts of the capital city of Prague and the inclusion of certain municipalities to another district). In the capital city of Prague, there are the administrative city districts defined at the district level, but these are not included in the publication.*

The code given in the tables after the name of the district is the code of the district according to the OKRES_LAU territorial nomenclature, the code after the name of the region is the code of the region according to the CZ-NUTS classification of territorial statistical units.

*The publication contains data on the population and population change of the individual districts in the ten-year time series 2016–2025 with **all data referring to the territory of a given district** valid **as of 1 January 2026**. The presented data for individual districts are thus fully comparable over time[1].*

The following territorial changes of the districts took place in this period:

As of 1 January 2021, the municipality of Černíky was newly incorporated into the Kolín district (before in the Nymburk district), the municipalities of Bukovec, Čečovice, Černovice, Holýšov, Horní Kamenice, Kvíčovice, Neuměř, Štichov and Všekary into the Plzeň-south district (before in the Domažlice district), the municipality of Harrachov into the Jablonec nad Nisou district (before in the Semily district) and the municipalities of Študlov and Valašské Příkazy were integrated to the Zlín district (before in the Vsetín district).

Marriages are territorially classified according to the groom's place of residence (unless otherwise stated). The average age of the groom/bride at marriage is based on the distribution of the number of marriages by age of groom/bride.

Divorces are territorially classified according to the last common residence of the married couple. The duration of the marriage is based on the date of the marriage and the date when divorce became legally effective. The average age of the man/woman at divorce is based on the distribution of the number of divorces by age of man/woman.

---

[1] In the case of a change in the territorial determination of a district in a given time series, the data presented here for the years prior to this change differ from the data presented in other outputs of demographic statistics of the Czech Statistical Office and in the Public database for a given district and year.

The births are territorially classified according to the mother's place of residence at the time of birth. The birth order is collected only for live births and from live births. Unlike other CZSO outputs, age-specific fertility calculated here are based on the average population of women in the relevant age group calculated as the simple average of the population stocks of women as at 1 January and 31 December in the relevant year (i.e. the sum of these average population counts by age is not equal to the mid-year number balanced as at 1 July). The total fertility rate is obtained from the rates calculated in this way.

Abortions are territorially classified according to the woman's place of residence at the time of the abortion. The time series ends in 2023, as from 2024, abortions are no longer included in the demographic statistics processed by the Czech Statistical Office.

Data for migration are given in total, i.e. in aggregate of internal and international migration. In addition, the inter-municipal migration within the district is also presented.

Symbols used in the tables:

Hyphen (-)	*in place of the number indicates that the phenomenon did not occur*
Dot (.)	*in place of the number indicates that the data is not available or is unreliable*
Letter (x)	*a horizontal cross in place of the number indicates that record is not possible for logical reasons*
