

Methodology of revision in 2010-2011

- survey

Representatives from the quarterly statistical survey Cený Stav 1-04 have been sorted by the new system of nomenclatures TSKPstat since 2012. A new representative for installation and supply of moving staircase or stairway has been created.

- calculation

The weighting scheme has been put together from results of construction production in 2007-2010. A method of chaining have been used for the revision. Aggregations of price indices have been put together in primary time series and have been converted by constants to secondary time series after that – **aggregations** of price indices **can not be put together** in the secondary time series. Price indices **based on the 2005 average** have been published since 2007. The time series have been connected with the previous published data.

- publication

A new table of price indices of selected construction works in the TSKPstat has been put together. It is possibility of publishing of construction works price indices which are not included in the CZ-CPA classification.
